DBMS	Oracle, MySQL, Sql Server,
OPERATING SYSTEMS	Solaris, Ubuntu, Redhat, Windows,
LANGUAGES	Javascript, HTML, CSS, C#, Java, C++, C, Cobol
WEB FRAMEWORKS	NodeJS, AngularJS, Bootstrap

PROFESSIONAL EXPERIENCE

LexisNexis Risk Solutions, Alpharetta, Georgia
(*LexisNexis acquired ChoicePoint*)

2008 - 2015

Director, Software Engineering

2008 - 2015

Software development leader for the organization's market leading Identity Management Solutions product line. Responsible for full lifecycle development of the Java based systems.

- Managed full stack Java developers in the US and Israel.
- Designed the workflow engine component for the US system.
- Wrote C# Winforms code that reduced adhoc report turnaround times and freed-up engineering resources. The enhancement was part of an app I developed and evolved since 2003.
- Created a website using php that provided the developers with tools that augmented functionality in our Administration module.
- Chased down several production issues, determined the root cause and drove resolution.
- Conducted code reviews.
- Used a generalized Agile process to drive new feature development and bug fixes.
- Managed project technical budgets.
- Achieved 100% retention of all technical resources (Dev, QA, DBA, DevOps) post a major acquisition.
- Identified, prioritized and implemented incremental system improvements to increase stability and performance.

ChoicePoint, Alpharetta, Georgia

1997 - 2008

Assistant Vice President New Technology /Principal Architect

2004 - 2008

Served as the business units BIO (Business Information Officer) prior to merger with a larger unit. I was the development leader for the organization's market leading Identity Management Solutions product line.

- Hosted weekly Horizon planning meetings in order to create and maintain close collaboration with the DevOps team.
- Developed and executed a technology transformation program to introduce better tooling for software development and version control. Scope included staff augmentation for skills development with emphasis towards building Agile Development and Service Oriented Architecture competencies.
- Worked closely with product management teams to align technology with product strategy and goals.
- Focused the team of quality analysts and engineers on process improvement through implementation of QA best practices.
- Established a program for periodic performance testing.
- Designed and coded a testing tool (written in C#) that significantly reduced the time for regression tests. This application also became an invaluable tool for modeling customer data and assisting in product quality reviews.
- Prototyped an Entity Resolution system for assigning a unique person id to a set of records.
- Investigated ETL Tools (Ardent DataStage)
- Investigated Data Quality Tools

Team Lead

1997 – 1999

Working for ChoicePoint, I was hired as part of the Y2K team for Mainframe code remediation. Responsibilities also included lead architect and developer to re-write ChoicePoint's National Credit File (NCF) system.

- Developed the distributed architecture to communicate with the big 3 credit bureaus.
- Lead a team of 3 developers (consultants and employees).
- First to integrate C code in the mainframe environment.
